

RCC Dental Program

Exposure and Immunity Requirements Form

Students can use this form as a guide to ensure they have all required supporting documents needed to upload to Student Passport (or other designated online records storage system) by the assigned date.

Student ID # _____, Last Name _____, First Name _____, Middle/Maiden Name _____

1. Measles, Mumps, and Rubella (MMR)

Student must have documentation of ONE of the following: **Check (✓) one.**

___ I have received **two doses** of MMR vaccine after 12 months of age and at least one (1) month apart.

Date of 1st dose: _____ Date of 2nd dose: _____

- OR -

MMR titer indicating immunity: Titer for: _____ Date Read: _____

2. Tdap (diphtheria, tetanus and acellular pertussis): Date of Tdap: _____ (Must have booster every 10 years)

3. Chicken Pox (Varicella)

Student must have documentation of ONE of the following: **Check (✓) one.**

___ I received the 2-dose Varicella vaccine. Date of 1st dose: _____ Date of 2nd dose: _____

- OR -

___ I received the Chicken Pox titer indicating immunity. Date read: _____

4. Tuberculosis

Mantoux tests must be read and documented by a licensed healthcare professional (nurse, nurse practitioner, physician assistant, or physician). Student must have ONE of the following: **Check (✓) one.**

QuantIFERON TB Gold blood test: Date: _____ Results: _____

- OR -

Skin test: Date: _____ Date Read: _____ Results: _____

- OR -

Chest X-ray Date: _____

5. Hepatitis B (Hep B)

Student must provide documentation of ONE of the following: **Check (✓) one.**

___ I have COMPLETED the 3-dose Hep B Series. Date completed: _____

- OR -

___ I am in the PROCESS of completing the Hepatitis B series. Date of 1st dose: _____ Date of 2nd dose: _____

- OR -

___ I have a laboratory report showing my immunity to Hepatitis B.

6. Influenza (Flu) Date of annual Flu vaccination: _____

(Definitions) Exposure and Immunity Requirements Form

Additional information/definitions to explain requirements for immunizations needed for the Dental Program.

1. Measles, Mumps, and Rubella (MMR) – A combination vaccine consisting of Measles, Mumps, and Rubella. This is a 2-dose series, 28 days apart. If supporting documentation is not available, a titer is required to show immunity. Student must have documentation of ONE of the following: 1) Received **two doses** of MMR vaccine after 12 months of age and at least one (1) month apart - **OR** - 2) MMR titer indicating immunity.

2. Tdap (diphtheria, tetanus and acellular pertussis)

- Tetanus booster is required at least every 10 years.
- Tdap – required at least one time between ages 11 and 64. Some providers use Tdap as a tetanus booster.
- Note: Tdap is not the same as other vaccines containing some or even all of the vaccine components (D-T-A-P) such as DTap, Td, or DT, -and- are not interchangeable.

3. Chicken Pox (Varicella) – Must have received either a 2-dose series of the vaccine or have a titer indicating immunity. Note that a history of having had the Chicken Pox is insufficient.

4. Tuberculosis – Must provide one of the following completed prior to program start and annually:

- TB QuantiFERON Gold blood test must be completed before start of the program and must be completed annually thereafter.
- Blood test must be completed before start of the program and must be completed annually thereafter.
- Skin test must be completed before start of program. Lake Superior College programs require test be completed prior to start of clinical. The Mantoux must be completed annually thereafter.
 - The 1st step of a Two-Step Mantoux consists of having provider place tuberculin under skin and returning 48-72 hours later to have it read.
 - **Note:** If you have ever had a positive Mantoux, blood test, you will need to provide documentation that you have completed therapy and have a clear chest X-ray. Also, if any of the above tests will expire during your clinical, you will be required to complete the test prior to the expiration date.

According to the CDC, repeat chest X-ray (after a positive Mantoux and negative chest X-ray) is not necessary unless there has been significant exposure to a person with TB or if you have any of the symptoms listed below. Please discuss your concerns with your health care provider (e.g. MD, FNP, PA).

If there is a history of positive Mantoux test and negative chest X-ray: Do you have any of the following symptoms, which may indicate active TB?

Chronic cough of more than two weeks Fatigue/tire easily Lethargy Loss of appetite
 Coughing up bloody sputum Unexplained weight loss Fever/chills Night sweats

5. Hepatitis B (Hep B) – Health career program students may be exposed to blood or other potentially infectious materials; therefore, may be at risk of acquiring the Hepatitis B virus (HBV). Students must provide documentation of having been vaccinated against Hepatitis B by completing the Hepatitis B 3-dose series, or have a laboratory report showing immunity to Hepatitis B.

6. Influenza (Flu) – An annual influenza (flu shot) vaccination is required. Summer and fall cohorts will receive notification when the deadline is to turn in documentation for receipt of flu vaccine. Spring cohorts are required to turn in documentation with all other immunization information.
